Seminars Presented

- Automatic License Plate Recognition

  - The objective is to design an efficient automatic license plate identification system using image processing.
  - The developed system first detects the vehicle and then captures the vehicle image.
  - Vehicle number plate region is extracted using the image segmentation in an image. Optical character recognition technique is used for the character recognition.
  - Resulting data is then used to compare with the records on a database so as to come up with the specific information like the vehicle owner, place of registration, address, etc. The system is implemented and simulated in Matlab, and its performance is tested on real image.

Projects

- Title: Border Security: Laser Defense System

  - Aim: To design and build a laser defense system for automatic detection and strafe of intruders breaking into border or a specific area.
  - This project presents a microcontroller-based security system which monitor and control the entry of intruders into our country.
  - Using this system leads in reducing soldier's efforts and also saves soldier's lives.
  - This system can also be used in various places such as Banks, Museums, National events etc., By just reducing the frequency.

Extra Curricular Activities

- Been a part of college official dance team and won few competitions
- Been a part of band team and lead the team

Personal Information

Date of Birth: 07 November, 2000
Gender: Female
Marital Status: Single
Mother Tongue: Tamil
Languages Known: English, Kannada, Hindi ,Tamil.
