

ABDUL RAHIMAN

S/o ABOOBAKKAR PUNJALKATTE KUKKALA BELTHANGADY D.K-574233 KARNATAKA, INDIA
9591162486 | arahiman970@gmail.com

OBJECTIVE

To utilize my technical skills for achieving the target and developing the best performance in the organization. I would like to implement my innovative ideas, skills and creativity for accomplishing the projects.

Experience

- RLOGIC Technologies Bangalore** November 2021 - January 2022
Technical Engineer(Display Technician)
- Lakshya Electricals Pvt Ltd Bengaluru** -
Electrical Site Supervisor
Working from February 2021

EDUCATION

- DARUL IRSHAD BOYS HIGH SCHOOL MITHUR, PUTHUR** 2012
SSLC
57.76%
- SACRED HEART PRE-UNIVERSITY COLLEGE MADANTHYAR** 2014
PUC
75.5%
- S.N MUDBIDRI POLYTECHNIC MOODBIDRI** 2017
DIPLOMA(Electrical & Electronics Engineering)
64.79%
- St. JOSEPH ENGINEERING COLLEGE VAMANJOOR**
B.E(ELECTRICAL & ELECTRONICS ENGINEERING)

SKILLS

- COMPUTER KNOWLEDGE
- QUICK LEARNER
- HARD WORKING
- RESPONSIBILITY
- TIME MANAGEMENT

PROJECTS

- AUTOMATIC PUMP CONTROL SYSTEM**
This project aims to build a single phase automatic motor pump starter for dual purpose. Using micro-controller IC 8051, micro-controller is a heart of the circuit and designed to be use for domestic purpose. This circuit is used for pumping the water to water tank and garden.
Solenoid valve is used to divert water either to water tank or to garden. Controlling of valve is done using micro-controller circuit using timing program. Sensor circuit in water circuit to ensure weather tank is full or empty depending on sensor condition valve will be closing or opening using Micro-controller program.
For gardening we are going to use fixed time format so that water will be given to garden for the fixed time format. This is also done by using Micro-controller program.

- **HYBRID INVERTER WITH SOLAR BATTERY CHARGING**

An intelligent hybrid inverter is a new generation of dedicated U.P.S(uninterruptible power system) which can use both electrical as well as solar energy to charge the system storage battery which can be used to generate electricity in the absence of either or both of energy sources.

Usually electricity from solar panels is generated only during the day, with a peak production around midday.

This electricity is fluctuating and not synchronized with the electric consumption of the household.

A solar inverter helps in converting the direct current into alternate current with the help of solar power. Direct power is that power which runs in one direction inside the circuit and helps in supplying current when there is no electricity

LANGUAGE

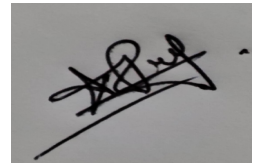

- KANNADA
- ENGLISH
- MALAYALAM

INTERESTS

- SURFING ON INTERNET
- PLAYING CRICKET
- SOCIAL ACTIVITIES
- COOKING

DECLARATION

- I declare that the above information is true and correct to the best of my knowledge and nothing has been concealed or distorted.
