PUC	Pre- University board	2017	68%
SSLC (10 TH STD)	KSSEB	2015	80%

ACADEMIC PROJECTS

2020

REGENARATIVE BREAKING

This project proposed to an energy recovery mechanism that slows down a moving vehicle or object by converting its kinetic energy into a form that can be either used immediately or stored until needed. In this mechanism, the electric traction motor uses the vehicle's momentum to recover energy that would otherwise be lost to the brake discs as heat. In addition to improving the overall efficiency of the vehicle, regeneration can significantly extend the life of the braking system as the mechanical parts will not wear out very quickly.

GOALS

- To become self dependent individual
- To be an expert in the field whichever work in
